Champion Supra Cassandra—Best in Show, Siamese Cat Club Show, 1965

Mrs. Joan Saunders of Lymekilns House, East Kilbride, Lanarkshire, owner-breeder of the Lymekilns Siamese, writes:—

"My Champion Supra Cassandra has achieved the highest honours in the Siamese world by being the Best Exhibit at the Siamese Cat Club Show 1965.

"From kittenhood, Cass as he is known to family and friends, has always been very keen on his Kit-zyme 'sweeties'. He looks for them as a regular nightly treat and we have games of 'finding' them at various points around the house.

"Cass—and the rest of my Siamese family—love their Tablets and I am convinced that their sparkling condition is due in no small measure to the healthful effects of regular Kit-zyme. To be without a large tin of Kit-zyme in the house would be like betraying a trust!"

Kit-zyme will benefit your cat too

IT IS A NATURAL TONIC AND CONDITIONER

Kit-zyme **VITAMIN RICH!**

At six weeks a kitten loses the natural immunity it gains from its mother's milk and becomes susceptible to the most deadly of cat diseases—Feline Infectious Enteritis. This killer strikes quickly; epidemics can sweep through a district without warning. Nine out of ten cats that contract the disease die; from first symptoms to death may be only a few hours; **THERE IS NO CURE.** The *only* safeguard against Feline Infectious Enteritis is to vaccinate.

Vaccination with TVL Enterovax will give your cat effective protection. Six weeks is the most suitable age to vaccinate, but a healthy cat can be vaccinated at any age. If your cat is to be shown, or is going into a cattery, vaccination is essential.

Ask your veterinary surgeon to protect your cat with TVL Enterovax Feline Infectious Enteritis Vaccine and give you a vaccination certificate.

TVL ENTEROVAX

Their shield against infection

protect them against
**ENTERITIS • DISTEMPER
SHOW-FEVER**

Many of the Country's leading breeders have adopted this simple, efficient ENTEROFAGOS method for the regular protection of their stock against the risk of microbic intestinal infection: ENTEROFAGOS Polyvalent Bacteriophage is supplied in glass ampoules, each containing one dose, which is given by mouth. ENTEROFAGOS is administered each week, with additional dosages immediately prior to Showing.

The product is completely harmless and safe to give at the first sign of trouble, even before the exact cause of infection has been diagnosed. Therefore, when in doubt, give ENTEROFAGOS immediately—freely and frequently. ENTEROFAGOS destroys the specific microbes that may be present, thus allowing the infected condition to clear up rapidly. If the infection has some other cause, ENTEROFAGOS prevents the microbic development which so often causes secondary complications.

For the treatment of associated conditions which show themselves in skin troubles, eye infections and catarrh, ANTIPEOL Ointment, OPHTHALMO-ANTIPEOL and RHINO-ANTIPEOL have an impressive reputation with many of Britain's foremost breeders.
